Northstar AI - Predictive Customer Success for Enterprise SaaS

Slide 1: Title & Overview

Company: Northstar AI Inc.

Founders: Alex Vance (CEO, ex-Salesforce VP), Dr. Maya Lin (CTO, Stanford AI PhD)

Vision: Eliminate unexpected enterprise churn with real-time customer behavior analytics.

Fundraising: Raising $2.5M Seed Round.

Problem: Silent Churn in B2B SaaS Costs $40B Annually

Slide 2: The Problem

Enterprise software companies lose 12-18% of revenue to net churn every year.

Current CS solutions (Gainsight, Totango) are retrospective health-score surveys, not real-time telemetry.

By the time a customer is flagged 'red', their renewal decision was made 90 days earlier.

Solution: Real-time Predictive Churn Telemetry Engine

Slide 3: Our Solution

Northstar connects directly to customer data warehouses (Snowflake, BigQuery, ClickHouse).

Our proprietary transformer models detect subtle drops in feature engagement, query frequency, and user seat usage.

Identifies accounts at risk 120 days before renewal with 88% predictive precision.

Market Opportunity: $14B Addressable Market

Slide 4: Market Size

TAM: $14.2B Global Enterprise Customer Success & Churn Prevention Software.

SAM: $4.5B Mid-Market & Enterprise B2B SaaS companies ($10M-$250M ARR).

SOM: $450M initial focus on AI, DevOps, and Data Infrastructure software vendors.

Traction: Strong Early Validation & Revenue Growth

Slide 5: Traction & Metrics

ARR: $420k ARR from 14 pilot enterprise customers.

Net Revenue Retention: 114% across early cohorts.

ACV: $30k average annual contract value.

Pipeline: $1.2M qualified pipeline in active evaluations.

Business Model & Go-to-Market

Slide 6: Business Model

Pricing: Annual subscription based on tracked ARR tiers ($24k-$75k/year).

GTM: Direct founder-led sales transitioning to VP Sales hire.

Sales Cycle: 45 days average from proof of concept to signature.

Competition: The Unfair Moat

Slide 7: Competitive Landscape

Legacy: Gainsight, ChurnZero (manual rule engines, difficult 6-month deployments).

Northstar Moat: Zero-code warehouse-native connectors, deployed in 2 hours.

Proprietary predictive weights trained across 50M anonymized session events.

The Ask: $2.5M Seed Round

Slide 8: The Ask & Use of Funds

Raising $2.5M Seed on a priced equity round.

Use of Funds: 50% Engineering & ML, 35% GTM & Account Executives, 15% Ops/Compliance (SOC2).

Milestones: Reach $2.0M ARR within 18 months and achieve Series A readiness.
